Protection of hands:
Preventive skin protection by use of skin-protecting agents is recommended.

Protective gloves
The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

Material of gloves
The election of suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material
> 480 minutes at layer thickness of 0.425 millimeter (Sol-Vex 37-695/Ansell).
The exact breakthrough time has to be found out by the manufacturer of the protective gloves and has to be observed.

For the permanent contact gloves made of the following materials are suitable:
Nitrile rubber, NBR
E.g. following product: Sol-Vex (37-695) from Ansell.
As protection from splashes gloves made of the following materials are suitable: PVC gloves
